

## Airwell HCD DC Split Inverter heat pump range

### **Perfect comfort, elegance and optimum efficiency: The Airwell HCD - DC Split Inverter wall mounted heat pump range**

**Paris, 23.03.2010**

The Airwell HCD "AllWell" Split Inverter heat pump range belonging to the company's premium line segment has been designed with a focus on air comfort and elegance whilst providing high energy efficiency.

Available in 5 sizes from 2.5 to 6.8 kW (cooling) and 3.5 to 7.0 kW (heating) the range is suitable for all residential and light commercial applications.

#### **Air comfort**

Whilst outdoor air quality has always been a major concern to everybody, few people realize the importance of indoor air quality, although we are spending on average more than 80% of our time indoors. Indeed, actual studies indicate that the level of indoor air pollution is 10 times higher than outdoors.

For that very reason and to provide optimum air comfort, Airwell has developed Airwell AirCare, a flexible filtration system of electrostatic, Nm photocatalyst and anti bacterial/electrostatic filters in combination with a bi-polar sterionizer. The bi-polar ions are the same as in nature inactivating viruses and bacteria and creating a comparable atmosphere to be found in a forest or near a waterfall.

The HCD AllWell Inverter range is equipped as a standard with the 3 in 1 Airwell AirCare filtration system providing its users with air-conditioned, healthy and clean air.

#### **Elegance**

Airwell's HCD AllWell Inverter range does not only provide highest air quality but also shows that comfort and elegance don't exclude each other. With its new high glossy panel, its integrated back lighted display and its flat and slim design, the range conveys a true feeling of elegance.

## Energy Label A

In today's context, however, air comfort and aesthetics alone are not enough. As the environmental impact of products plays an increasingly important role, the energy label for air-conditioners, according to the EU directive 2002/31/EC is a great support for users having to choose their equipment.

Airwell's HCD AllWell Inverter range has been awarded the Energy Label "A", which means most efficient from an energetic point of view. The end-user will therefore benefit from lower power consumption and will be able to cut down his electricity bill.

## More benefits

Users of the HCD AllWell Inverter range will benefit from numerous other advantages contributing to their comfort. Among them the optimal temperature regulation, the automatic treated air sweeping, the remote control and the LCD screen.

Installers will particularly appreciate that the units come pre-charged with refrigerant for up to 20m pipe length which allows great freedom of installation.

## About Airwell Group

The Airwell Group has 4 production sites world wide, some 2,500 employees and is represented in over 100 countries through more than 170 sales agencies. In 2008, the company achieved a turnover of more than 519 million US\$, 75% of it in Europe. The Airwell Group is one of the leading companies in the field of air conditioning, headquarter in Guyancourt, close to Paris. The most important brands in the company portfolio are AIRWELL, ELECTRA, FEDDERS and WESPER.
